

N87-29919**AIR FORCE ELECTROCHEMICAL POWER RESEARCH AND TECHNOLOGY PROGRAM
FOR SPACE APPLICATIONS**

Douglas Allen
Air Force Wright Aeronautical Laboratories
Wright Patterson Air Force Base, Ohio

An overview is presented of the existing Air Force electrochemical power, battery, and fuel cell programs for space applications. Present thrusts are described along with anticipated technology availability dates. Critical problems to be solved before system applications occur are highlighted. Areas of needed performance improvement of batteries and fuel cells presently used for flight applications are presented. Long range plans and performance goals are outlined including target dates for key demonstrations of advanced technology. Anticipated performance and current schedules for present technology programs are reviewed.

Programs that support conventional military satellite power systems and special high power applications are reviewed. Battery types include bipolar lead-acid, nickel-cadmium, silver-zinc, nickel-hydrogen, sodium-sulfur, and some candidate advanced couples. Fuel cells for pulsed and transportation power applications are discussed as are some candidate advanced regenerative concepts.

100 WH/# BATTERY, USEABLE PER CYCLE
5 WH/IN³
HIGH CELL VOLTAGE, > 3.5 V/CELL
ALL ORBIT CAPABILITY
80% ENERGY EFFICIENCY, 100% COULOMBIC
STATE OF CHARGE
TIGHT VOLTAGE REGULATION
OPERATING TEMP COMPATIBLE WITH EFFECTIVE THERMAL CONTROL
15 YR CALENDAR LIFE; 6000 ONE HR DISCHG, 23 HR CHG CYCLES;
30000, 0.5 HR DISCHG, ONE HR CHG CYCLES
SURVIVABLE
EASILY MODELED, PREDICTABLE BEHAVIOR
100 THERMAL CYCLES
AFFORDABLE, \$50K/KWH
